

An Investigation of the Rotation Period of the Sun, by Spectroscopic Methods (Classic Reprint) (Paperback)

Filesize: 4.88 MB

Reviews

Complete information! Its such a great study. It is probably the most amazing book i have got study. Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Mr. Roger Luetgen III)

**AN INVESTIGATION OF THE ROTATION PERIOD OF THE SUN, BY SPECTROSCOPIC METHODS
(CLASSIC REPRINT) (PAPERBACK)****DOWNLOAD PDF**

To get **An Investigation of the Rotation Period of the Sun, by Spectroscopic Methods (Classic Reprint) (Paperback)** eBook, remember to click the hyperlink under and download the document or have accessibility to additional information which are have conjunction with **AN INVESTIGATION OF THE ROTATION PERIOD OF THE SUN, BY SPECTROSCOPIC METHODS (CLASSIC REPRINT) (PAPERBACK)** book.

Forgotten Books, United States, 2016. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from An Investigation of the Rotation Period of the Sun, by Spectroscopic Methods All of the preceding determinations of the rotation period of the sun, with the exception of that Of Jewell, have been based on visual observations. While it is probable that the photographic method does not possess for such an investigation the overwhelming advantages which it has in the case of faint and difficult spectra, it has certain points of superiority which render an independent determination by its aid of the greatest value. Two Of these are especially important. The visual determinations have been based upon a very limited number of lines in the less refrangible part of the spectrum. With the photo graphic method it is possible to employ a much larger number Of lines and to utilize the more refrangible part of the spectrum where the lines are more numerous and the variety of elements which can be employed correspondingly greater. These facts were fully realized at the time Of the establishment of the Mount Wilson Solar Observatory, and plans were made for taking up a photographic investigation of the rotation period of the sun as soon as suitable instrumental equipment was ready. With the completion of the Snow telescope, and the powerful 18-foot spectrograph used in conjunction with it, a combination of apparatus admirably adapted for the work was available, and accordingly in the spring of 1906 the first Observations were begun. These were continued until June, 1907, after which all observational work on the rotation of the sun was transferred to the tower telescope. Since the investigation was commenced five series of observations have been made and are discussed in the pages which follow....
