Astronomy and astro-physics Volume 13

By Carleton College. Observatory

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 362 pages. Dimensions: 9.7in. x 7.4in. x 0.8in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1894 Excerpt: . . . stars were discovered by MM. Wolf and Rayet, in 1867 at the Paris Observatory, in the constellation Cygnus. M. Respighi, in 1871 at Madras, found that y Argus has a similar spectrum. Professor E. C. Pickering discovered three others, at Cambridge, while sweeping for gaseous nebulae with a telescope provided with a spectroscopic eyepiece. By the same method Dr. Copeland, at Puno, Peru, detected five more; and at Dun Edit, using an object-glass prism, he found a sixth. The astronomers of Harvard College Observatory have the great credit of discovering forty-two stars of this type since 1888. They were found, for the most part by Mrs. M. Fleming, by means of the bright bands in their photographed spectra on the Henry Draper Memorial plates. The photographs were made at Cambridge and in Peru. Communicated by the author. The fifty-five Wolf-Rayet stars now known are arranged in...

Reviews

This book is definitely worth getting. It usually will not price too much. Its been printed in an extremely simple way in fact it is only right after i finished reading this publication where basically altered me, modify the way i think.

-- **Avery Daugherty**

Great electronic book and valuable one. It really is simplistic but surprises within the fifty percent from the book. Its been printed in an extremely simple way in fact it is merely right after i finished reading this publication by which in fact modified me, change the way i really believe.

-- **Dr. Bethany Lindgren**
